Exercice I

3)
$$Z \neq 2$$
 st $Z' = \frac{4}{2-2}$

A) $ZB' = \frac{4}{26-2} = \frac{4}{1+\sqrt{3}i} = \frac{4}{1$

b)
$$Z \neq 2$$
 et $Z = -\frac{4}{Z-2}$

Donc $Z = -\frac{4}{Z-2}$

Orderp mother Copleres Epap on & related fonc: $|Z| = |Z| = |Z|$

C) M(Z) et MED : don (Z-2)=|Z|, don 12|=1 (can Z+2 in que MED et A&D).

landit, d'apri 36) = |Z|-2|=2×1=2, don |ZM'-ZA|=2, don AM'=2 et par

Suite Mayperhor an cercle T de Centre A et de regon 2.

DED or CED L'apropera). OR B=B+c=c. (d'opo q-30)

Exercice II

Airsi,
$$|Z^{m}| \le 10^{-5} \iff |Z|^{m} \le 10^{-5}$$
. D'aprò q. 2a), $|Z| = \frac{1}{4}$ (étim hojo.).

 $|Z^{m}| \le 10^{-5} \iff (\frac{1}{4})^{m} \le 10^{-5} \iff \ln(\frac{1}{4})^{m} \le \ln(10^{-5})$ par avissine de la str] ejes (...

 $|Z^{m}| \le 10^{-5} \iff m \ln(\frac{1}{4}) \le -5 \ln(10) \iff -m \ln(\frac{1}{4}) \le -5 \ln(10)$
 $|Z^{m}| \le 10^{-5} \iff m \ge -\frac{5 \ln(10)}{-2 \ln(\frac{1}{4})} \iff m \ge \frac{5 \ln(10)}{-2 \ln(\frac{1}{4})}$

Ake madrè: $5 \ln(10) \approx 82$

Are machè: 5h/10) ~ 8,3, donc come m EM, [Zm | \$10-5 (m) 29].

9 st donc le plus peht entien ici chende.

Exercice III

Exercice IV
